Language Attrition

Language attrition studies:

Language attrition studies show certain trends in language loss (the following characteristics are recorded in various studies; see Dorian 1989, Lambert and Freed 1982, Seliger and Vago 1991, Schmid 2011, Thomason and Kaufman 1988):

- 1) Loss of inflection
- 2) Reliance on modal verbs for tense/aspect/mode
- 3) Loss of marked structures
- 4) Loss of redundancy
- 5) Loss of subordination
- 6) Loss of synthetic structure (gain of analytic structure)
- 7) Stylistic shrinkage

Studies on creoles:

The following features are typical of **creoles**, according to various studies (see, Bickerton 1981, Givón 1979, Thomason and Kaufman 1988):

- 1) Lack of inflection
- 2) Lack of markedness
- 3) Juxtaposition of verbs; serial verbs
- 4) Analytic structures

The main historical trends in Ch'orti' have been:

- 1) Loss of synthetic structure
 - a) Loss of tense/aspect markers on the verbs
 - b) Loss of contrastive subordinate marking on embedded verbs
- 2) Gain of analytic structure
 - a) Increase reliance on auxiliaries and particles to mark tense/aspect
 - b) Increase in types of subordinating conjunctions (some developed in Ch'orti'; some borrowed from Spanish)
- 3) Increased reliance on juxtaposition of verbs
 - a) Verbs of motion in verb-verb (serial verb) constructions
 - b) Complement constructions of purpose, desire, result, and others
- 4) Stylistic shrinkage

Some of the language reductions can be directly attributed to the influence of Spanish structure on Ch'orti', particularly the borrowing of subordinate conjunctions. The other changes are less obviously related to contact with Spanish, but because of their similarity to that which happens in language attrition due to bilingualism or other language contact, I am claiming here that the changes are not due as much to internal pressures, as to external ones.

Overall, the changes have resulted in an ***increased leveling of structure (or reduction of embeddings)*** such that many constructions in Ch'orti' can be interpreted ambiguously as involving subordination, coordination, or serial verbs.
